EventBase Cloud — Next.js Cloud Event Ticketing & Registration SaaS

1. Executive Summary & Overview

EventBase Cloud is a modern, cloud-native Next.js SaaS application offering a frictionless slide-over checkout drawer, real-time sales reporting, attendee self-service, automated refund management, and SMS text-blast marketing.

2. PROBLEM & ARCHITECTURAL CHALLENGE

The Problem: Traditional multi-page event checkout flows cause high drop-off rates on mobile devices, and organizers lack built-in tools to broadcast SMS text blasts to attendees.

The Challenge: Building instant client-side checkout drawers with optimistic UI state updates, zero-latency payment verification, and clean mobile responsive layouts.

3. THE ENGINEERING SOLUTION

A modern Next.js 14/15 application featuring slide-over ticket drawers, real-time revenue analytics charts, automated refund workflows, and SMS broadcast marketing.

4. Key Functional Modules

Slide-Over Ticket Checkout Drawer
Frictionless single-screen ticket selection and guest details capture.

Real-Time Sales & Revenue Analytics Panel
Live charts tracking revenue, ticket counts, and net payouts.

Text Blast & SMS Notification Engine
Direct SMS marketing to registered attendee segments.

Automated Refund & Payout Workflow
One-click refund processing with automatic inventory restock.

Attendee Self-Service Portal
Ticket view, invoice download, and attendee profile editing.

Dark/Light Theme Responsive UI
Optimized for both mobile attendees and desktop administrators.

5. Technology Stack & Deployment Architecture

Frontend: Next.js (App Router, React, TypeScript), Tailwind CSS, Lucide Icons

Backend: Vercel Serverless Functions / Next API Routes

State & UI: Radix UI primitives, Recharts Analytics
