Otelogia

Otelogia — Cloud Hotel Property Management & Room Reservation PMS System

1. Executive Summary & Overview

Otelogia is a cloud-based Hotel Property Management System (PMS) built for boutique hotels, resorts, and guesthouses. It unifies front-desk reservations, guest check-ins, room inventory grids, billing folios, and housekeeping room cleaning statuses.

2. PROBLEM & ARCHITECTURAL CHALLENGE

The Problem: Independent hotels face double-booking errors, chaotic paper guest folios, and slow communication between the front desk and housekeeping teams.

The Challenge: Managing dynamic room availability across multiple room categories, handling seasonal pricing tariffs, maintaining itemized guest folios, and keeping housekeeping statuses synchronized.

3. THE ENGINEERING SOLUTION

A centralized hotel PMS with visual occupancy grids, one-click check-ins, guest billing folios, and live housekeeping tracking.

4. Key Functional Modules

Visual Room Inventory & Occupancy Grid
Real-time room status view (Occupied, Available, Cleaning, Maintenance).

Front Desk Quick Check-In / Check-Out
Fast guest arrival registration, ID capture, and keycard allocation.

Dynamic Pricing & Seasonal Tariffs
Configurable pricing for weekdays, weekends, holidays, and peak seasons.

Housekeeping Management Board
Real-time room cleaning requests and staff status updates.

Guest Folio & Extra Billing

Guest CRM & Stay History
Guest preferences, VIP tags, and contact databases.

Itemized room charges, room service, laundry, and mini-bar billing.

Revenue & Occupancy Reporting
Night audit summaries, average daily rate (ADR), and RevPAR analytics.

5. Technology Stack & Deployment Architecture

Backend: Laravel (PHP) | Database: MySQL | Frontend: Blade, Bootstrap / Tailwind CSS, Chart.js

Architecture: Multi-Room Relational Database Design
