Tutor Hub

TutorHub — On-Demand Online Tutor Marketplace & Student Class Booking LMS

1. Executive Summary & Overview

TutorHub is an educational marketplace connecting students with verified independent tutors across academic disciplines, languages, and professional certifications. The platform streamlines tutor discovery, hourly rate transparent comparison, lesson scheduling, student reviews, and direct communication.

2. PROBLEM & ARCHITECTURAL CHALLENGE

The Problem: Students struggle to find vetted, qualified tutors suited to their specific learning style and budget, while private tutors lack an all-in-one software tool for managing availability, student bookings, lesson notes, and earnings.

The Challenge: Real-time calendar availability synchronization across multiple time zones, handling lesson cancellations/rescheduling rules, preventing platform circumvention, and managing dual-sided student and tutor onboarding.

3. THE ENGINEERING SOLUTION

A comprehensive two-sided educational platform offering subject-filtered tutor discovery, calendar slot booking, lesson reminder notifications, verified student rating systems, and administrative compliance verification.

4. Key Functional Modules

Tutor Search & Filtering Engine
Search by subject, grade level, price range, and student rating.

Tutor Public Profiles & Verification
Experience summary, qualifications, introduction video, and verified badges.

Interactive Booking & Schedule Calendar
Real-time appointment slot selection and lesson confirmation.

Student Dashboard
Upcoming lessons, past session history, notes, and tutor bookmarks.

Tutor Management Hub

Reviews & Rating System

Availability schedule manager, incoming booking requests, and student rosters.

Post-lesson feedback collection ensuring marketplace quality.

Admin Oversight Desk

Tutor credential verification, user moderation, and platform activity metrics.

5. Technology Stack & Deployment Architecture

Backend: Laravel (PHP) | Database: MySQL | Frontend: Blade Templating, Tailwind CSS, JavaScript

Architecture: Dual-Sided Marketplace Architecture with Role-Based Permissions
