CASE STUDY / AI SAAS / DROPPR.AI

DropPR.ai

Turn a video, voice note, or photo into a publication-ready, SEO-optimized press release, then distribute it to 1,500+ sites, all from one AI platform.

PRODUCT	BUILT WITH	STATUS
End-to-end AI press release creation, automation & distribution SaaS	Next.js · React · Node.js · LLMs · Stripe	Live at droppr.ai

01 / PROJECT OVERVIEW

Project Overview

Turn a video, voice note, or photo into a publication-ready, SEO-optimized press release, then distribute it to 1,500+ sites, all from one AI platform.

DropPR.ai is a scalable, AI-powered press-release creation, content-automation, and distribution platform that helps businesses create, optimize, publish, and promote content at scale. Users generate publication-ready press releases and articles from multiple input methods: uploaded videos, images, voice recordings, real-time audio capture, and live in-platform video.

Advanced AI transforms those inputs into professionally written, SEO-optimized articles ready for high-authority sites, enhanced with backlinks, image selection, and automatic keyword generation. Built for performance and scale, it supports thousands of concurrent users through optimized backend architecture, structured processing pipelines, and background task queues.

02 / CORE FEATURES

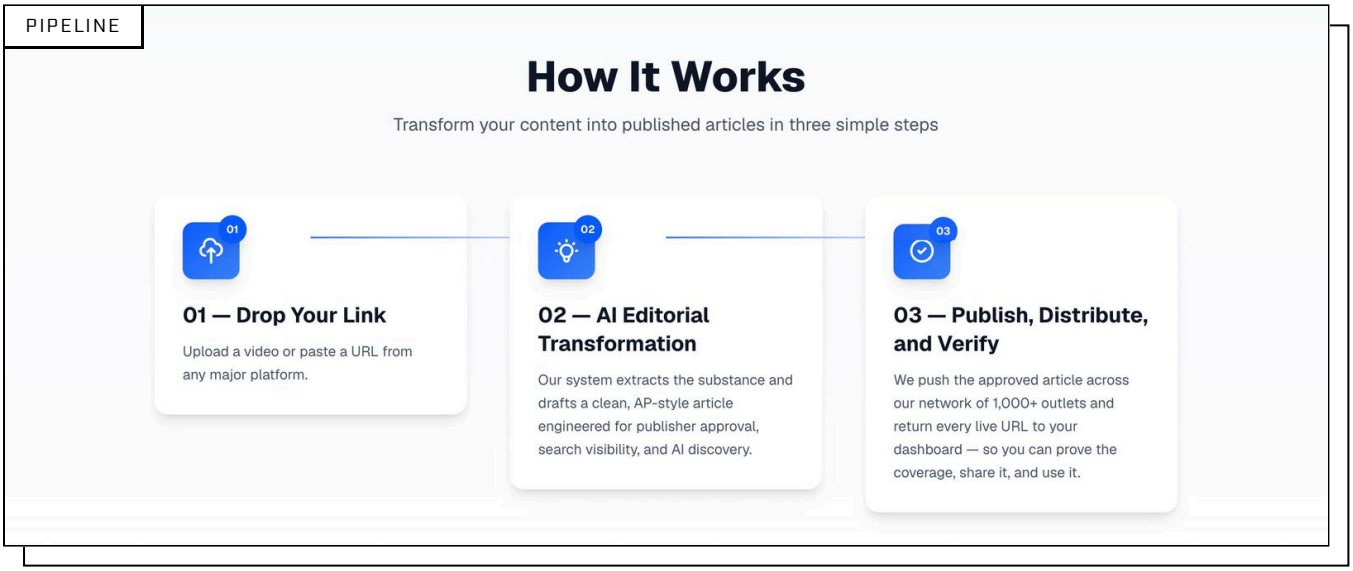

- Multimodal input: video, image, voice, real-time audio & live video capture
- Automatic SEO keyword generation, backlinks, and image selection
- Real-time, step-by-step processing visibility with retry/error handling
- Stripe-integrated payment and submission workflow
- AI voiceover generation for text/video/audio content repurposing
- AI generation of SEO-optimized, publication-ready press releases
- Background task queues for transcription and article generation
- Distribution across 1,500+ websites for large-scale exposure
- DropPR GPT: a specialized PR assistant powered by real-time web data
- News aggregation, blog ecosystem, and full admin panel

03 / WHAT SET THIS PROJECT APART

What Set This Project Apart

This is far more than an AI writing wrapper; it's a full content pipeline. The hardest engineering was the scalable processing architecture: background task queues managing video transcription and article generation for thousands of concurrent users, with real-time progress tracking from upload to publish and robust retry/error handling at every step.

> Two innovations stand out. First, true multimodal input: users can speak, record live, or upload media, and the AI turns any of it into polished, SEO-ready PR. Second, DropPR GPT: a specialized, PR-focused assistant with multi-session chats, folders, history, voice/text input, and real-time web data, turning the platform into an active PR strategist, not just a generator. Layered technical SEO (sitemaps, metadata, indexing) and 1,500+ site distribution make it a complete growth engine.

THE PIPELINE: DROP A LINK, AI EDITORIAL TRANSFORMATION, PUBLISH, DISTRIBUTE AND VERIFY.

04 / HERE'S HOW I MADE IT WORK

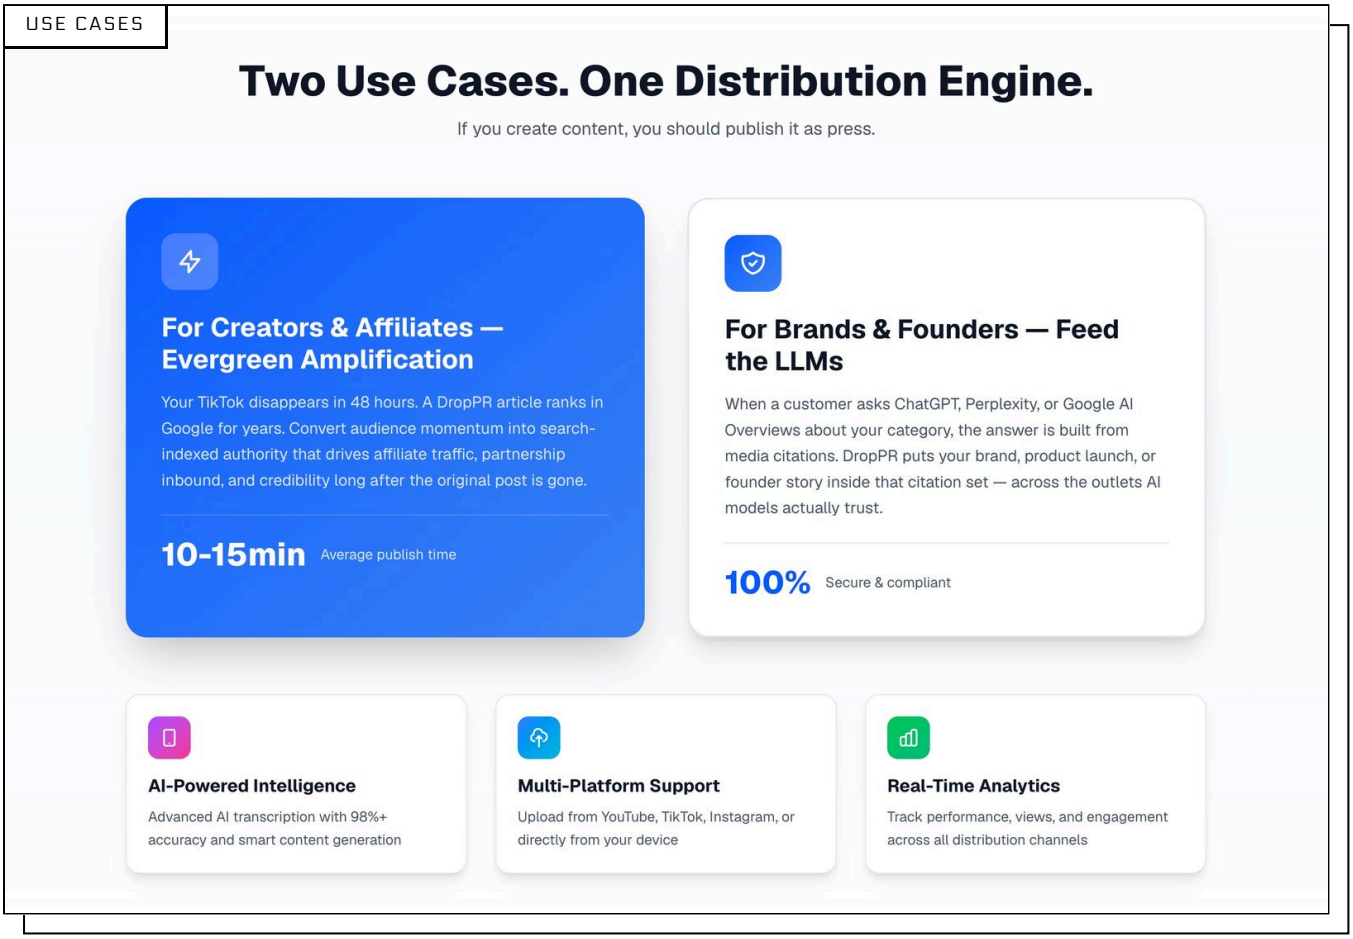

Here's how I made it work

- Built a scalable full-stack platform for thousands of concurrent users
- Implemented multimodal ingestion (video, image, voice, live capture)
- Added real-time progress tracking with strong error handling and retries
- Integrated Stripe payments and 1,500+ website distribution
- Engineered background task queues for transcription & article generation
- Developed AI article generation with automatic SEO keyword optimization
- Built DropPR GPT with multi-session chats, folders, history & voice/text
- Implemented technical SEO automation, security, and an admin panel

05 / TECH STACK

Tech Stack

LAYER	TECHNOLOGY
Frontend	Next.js, React (real-time progress UI)
Backend	Node.js, optimized scalable architecture
AI / LLM	Advanced AI, LLMs, DropPR GPT assistant, AI voiceover
Processing	Background task queues, transcription & generation pipelines
Payments	Stripe (submission & payment workflow)
SEO & Growth	Keyword generation, sitemaps, metadata, 1,500+ site distribution
Security	File validation, anti-spam, abuse prevention, activity monitoring

TWO USE CASES, ONE DISTRIBUTION ENGINE: CREATORS & AFFILIATES, BRANDS & FOUNDERS.

06 / PROJECT IMPACT

01 Turned any media input into publication-ready, SEO-optimized PR	02 Scaled to thousands of concurrent users with queued processing
03 Distributed content across 1,500+ sites for rapid brand exposure	04 Delivered DropPR GPT, a real-time, PR-specialized AI assistant
05 Monetized with an integrated Stripe submission-and-payment flow	06 Shipped an end-to-end, production-grade AI PR & content ecosystem
